

30%

productivity growth has been recognized at companies who installed JobCTRL[®]

JobCTRL® is an innovative concept to improve individual and enterprise level productivity by measuring and analyzing processes, organizing projects and human resources to build a better aligned workforce with more efficient operation.

“Best available tool to support decision-making, create corporate transparency and gain real-time cross-functional view of business operations.”

“JobCTRL® ensures the maximum utilization of organizational resources: it strengthens leadership effectiveness and consequently, increases the profit.”

“Fair climate is the employer's and the employee's common interest. JobCTRL® provides an objective evaluation system free from any discrimination.”

“JobCTRL® helps developing flexible work places and creating the conditions of productive mobile work.”

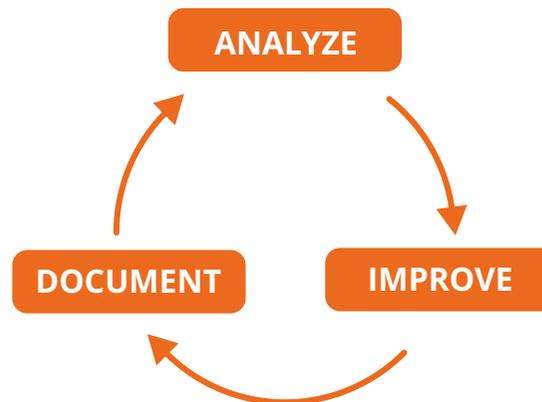

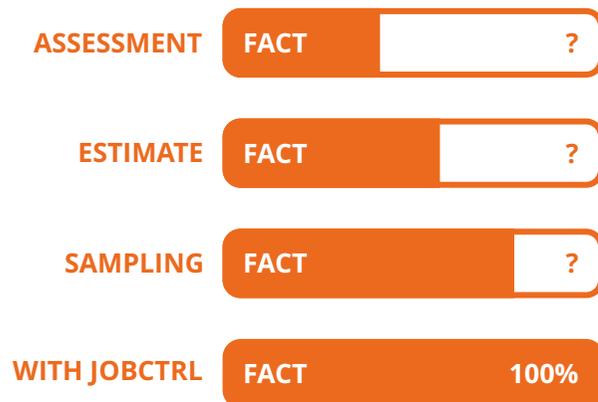

Document, Analyze, Improve

"You can't manage what you can't measure": all work related activity is collected and processed

Innovative aspects to analyze productivity and a new horizon of predictive modeling

See by a glance how to improve efficiency

- Uncover efficiency leaks and make employees stay focused on their tasks
- Optimize work execution and increase occupancy by 10% or more
- Real time status and cost tracking enables the soonest possible intervention in ongoing projects

JobCTRL[®] already proved

JobCTRL[®] innovatively address real efficiency problems and successfully satisfy existing market demands. The complexity enables the deployment from public to private sector, from manufacturing to services - where measuring success matters.

There was no company who did not introduce JobCTRL[®] after the pilot. And neither of the above companies realized less than 15% improvement in the first 3 months.

Documentation: more value from work data

JobCTRL® documents every important aspect of work: done in real time, without manual user interaction. Every work data is automatically captured and mapped with the proper projects, tasks, and customers.

Automated work administration empowers employees for a more focused and conscious performance and ensure impartial efficiency reports based on verified, exact data.

New aspects to analyze productivity

Reporting and Monitoring was designed with understanding the analytical needs of decision makers, and to reach business objectives in less time. It provides innovative insights, customizable for all operations, with easy drill-down to measured and undelayed productivity information.

JobCTRL® opens new aspects of success evaluation by accurate and objective performance markers and let you identify previously indiscernible trends.

Innovation translated into Efficiency

JobCTRL® transforms productivity data into the exact information a decision maker needs to control and improve profitability by managing process project, and people.

The management can quickly create precise forecasts on the financial performances of projects and customers. The customizable performance indicators of JobCTRL® unveil revenue opportunities or critical efficiency trends sooner than any other application, enabling the management to make positive corrections with confidence.

Targeted resource utilization

Accurate forecasting and scheduling of resources throughout the organization is the origo of optimized workforce utilization.

The resource management features of JobCTRL® let the executives

- review at a glance all ongoing project statuses broken down by task completion ratio
- match available workforce, unassigned tasks and project schedules on a timeline
- corporate level comparison of projects by profitability forecasted from undelayed progress data with customizable labor and billing costs.

JobCTRL® uniquely combine project management, budget monitoring and operational efficiency features to achieve continuous performance improvement across every aspect of enterprise operations.

Full control over budget and finance

JobCTRL® efficiently ensure increased control over accomplishing financial goals. The dashboard with project and customer actuals, internal costs and billables provide unbiased assessment of clients, contractors or individual users.

Online project monitoring is equipped to track and organize tasks against current status priorities, expenses and profitability in order to

- react on identified risks in a timely manner
- generate higher revenue and competitive advantage

Automated measuring and document

JobCTRL® enforces efficiency in production, processes, and workforce performance and equipped with customizable rules

- to automate project administration, task allocation,
- to detect and separate non-work activity,
- to ensure priority and deadline oriented work,
- to measure transactions and tasks completion

while time consuming manual administration is completely eliminated .

For office, home and field work

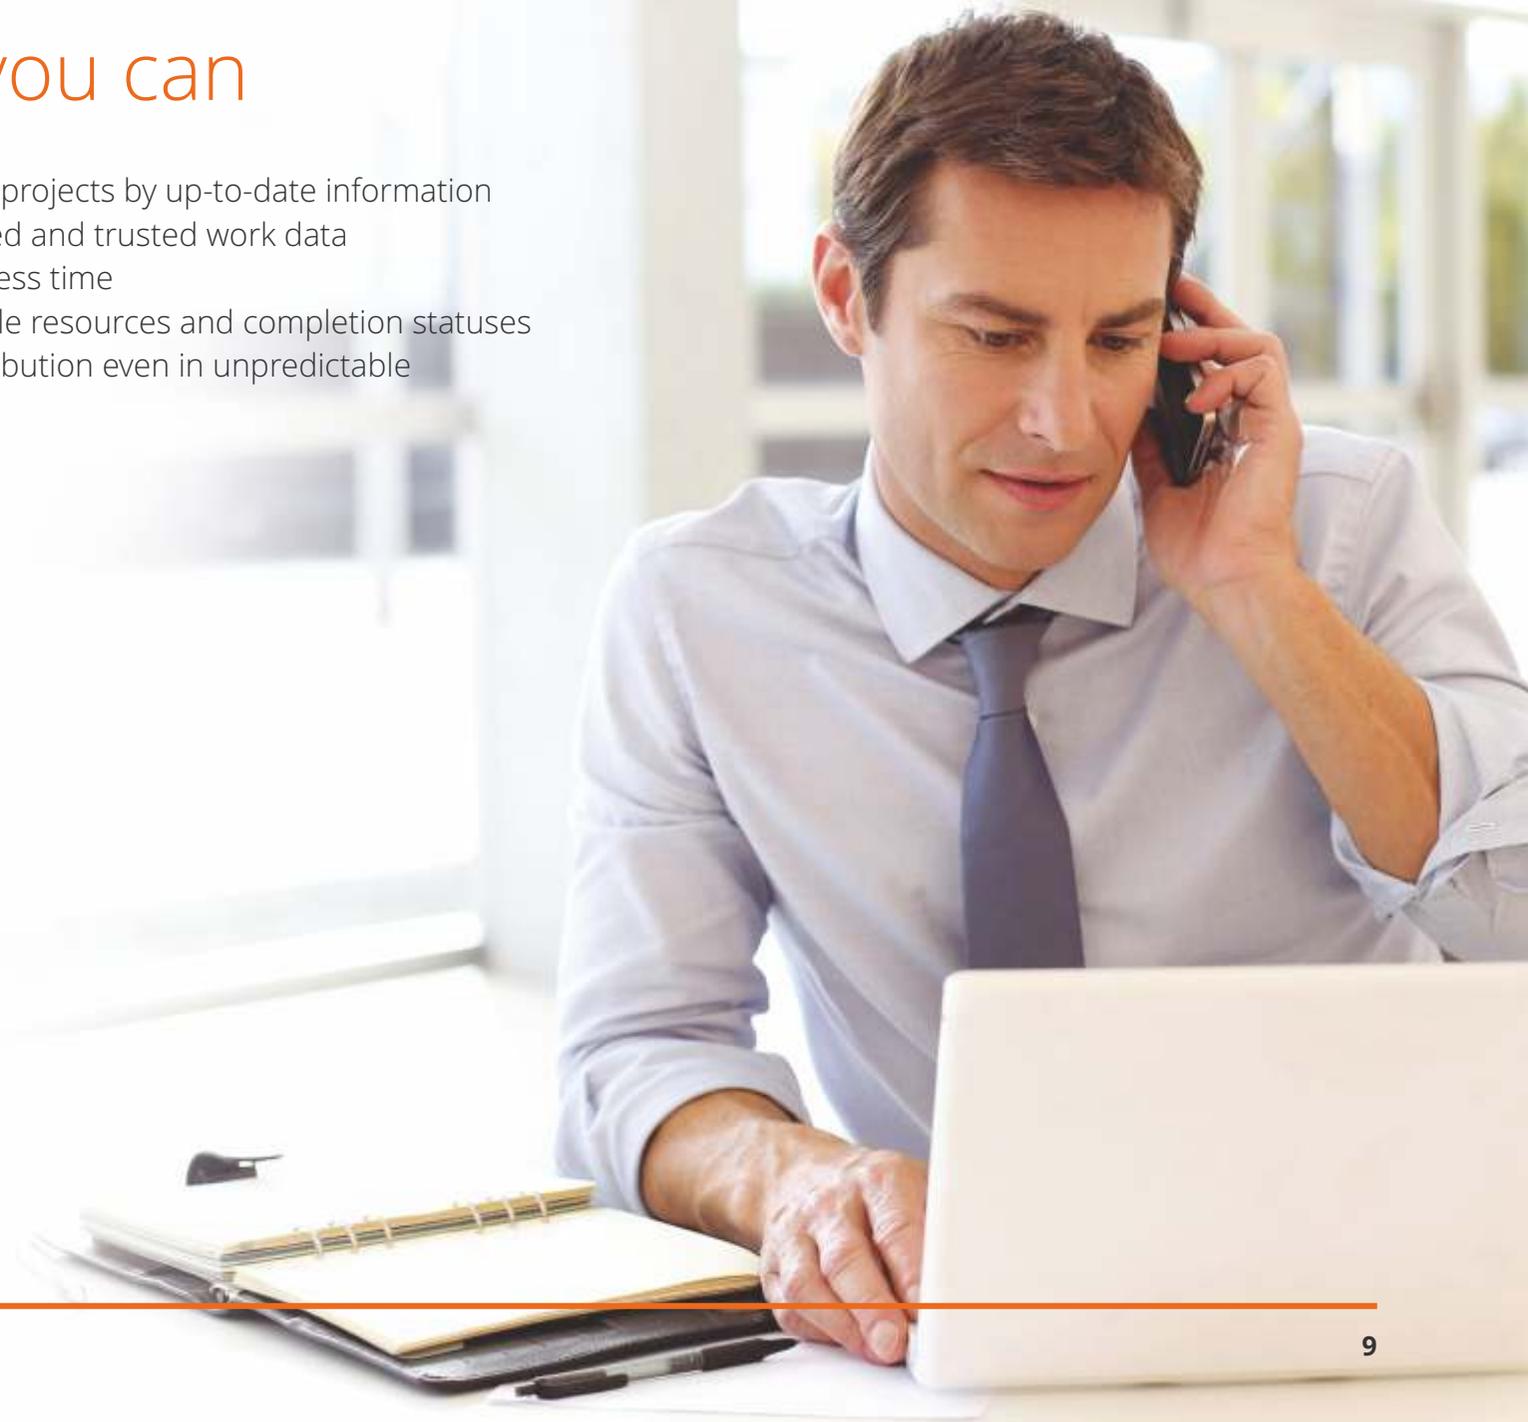

All work activities - from home, office or any external location - are logged and processed with maximum accuracy, and with no need of manual administration. Business phone calls, trips and locations, along any application data is automatically synchronized with server stored tasks, projects and customer databases.

JobCTRL® can be installed company wise (Win, Mac, Android), deployed from secure cloud service or have it integrated on-site.

With JobCTRL[®] you can

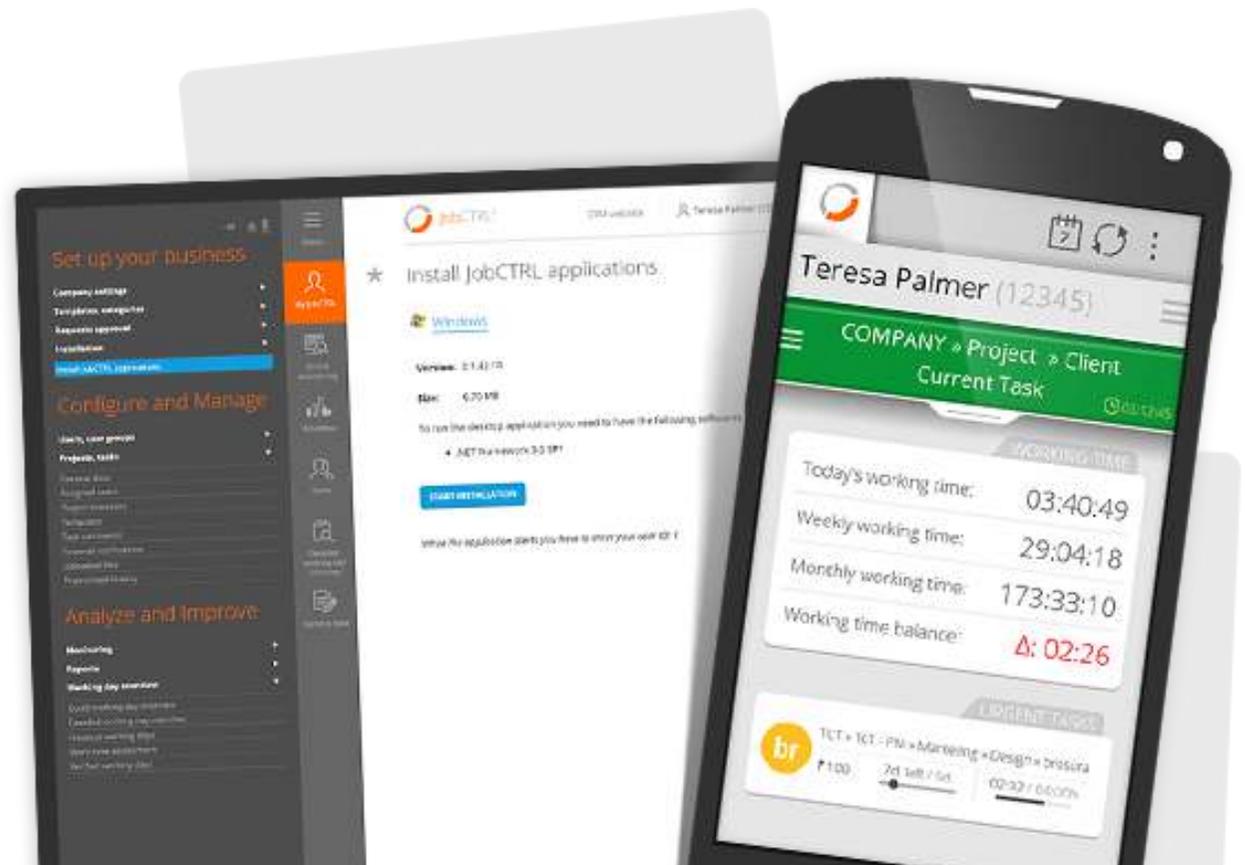

- track and compare all corporate projects by up-to-date information
- gain better insight from measured and trusted work data
- convert it to better decisions in less time
- overview all projects with available resources and completion statuses
- fast and accurate workload distribution even in unpredictable circumstances

Documenting work – anywhere

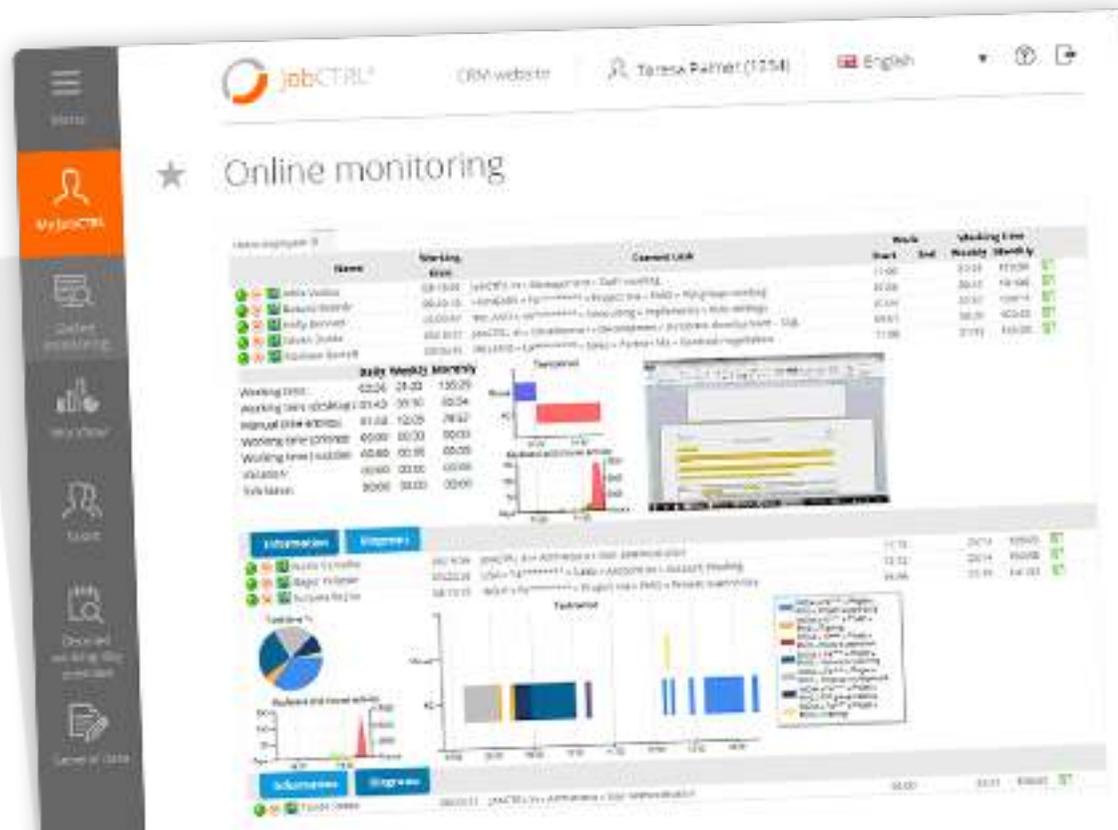

With the JobCTRL® mobile and desktop applications users can log their work basically anywhere. The tasks, projects and customers are also synchronized on the smartphone while activity documentation is supported with automated rules:

- assigning conversations to customers
- automated business trip reports
- location based project switching and task creation

Tracking progress with undelayed information

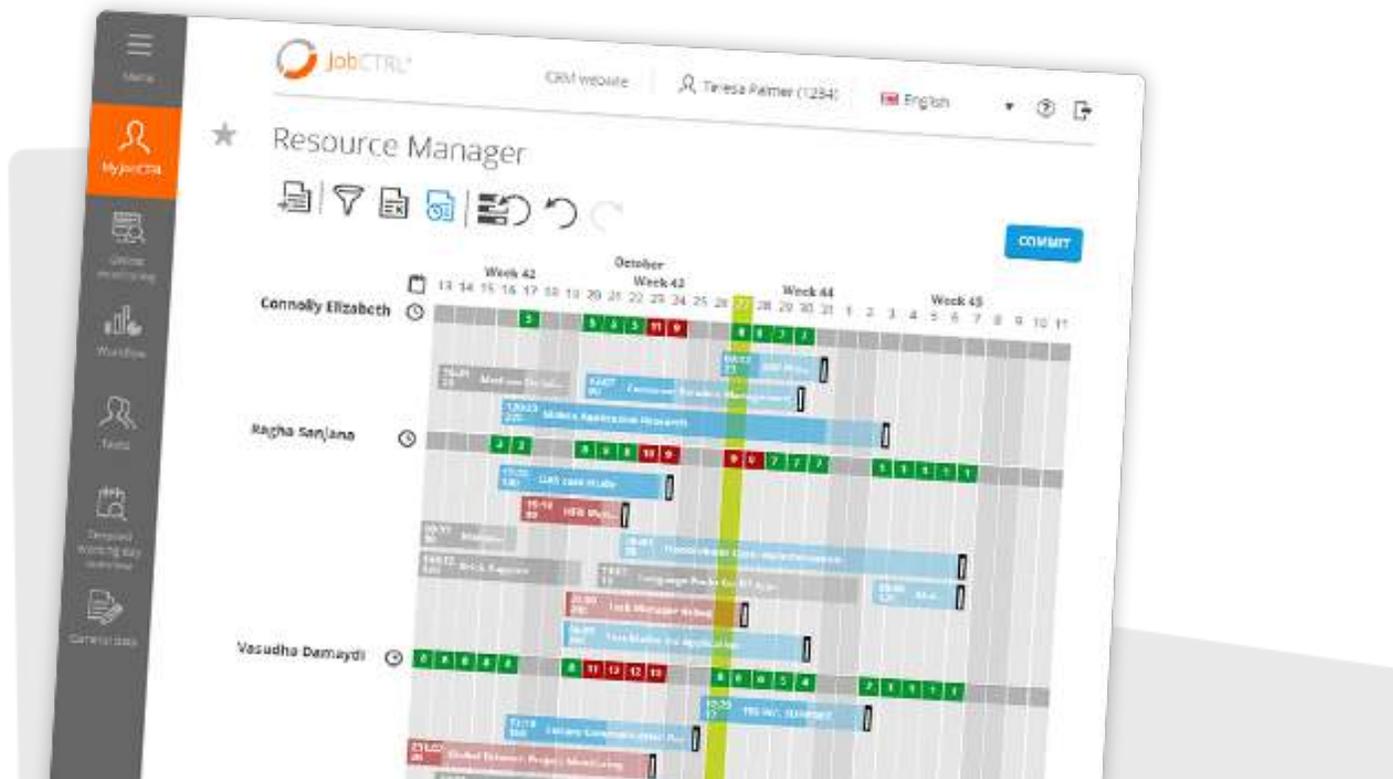

Activity data provided by the JobCTRL® applications are structured to satisfy the analytical requirements of business executives. The real time activity charts and diagrams provide a snapshot about actual utilization of human resource while detailed user and project reports reveal the efficiency trends throughout the organization.

Targeted resource allocation

In JobCTRL® the precisely measured transactions provide the basis of the efficiently managed projects. Accurate project updates in the interactive time-sheet of the Resource Manager:

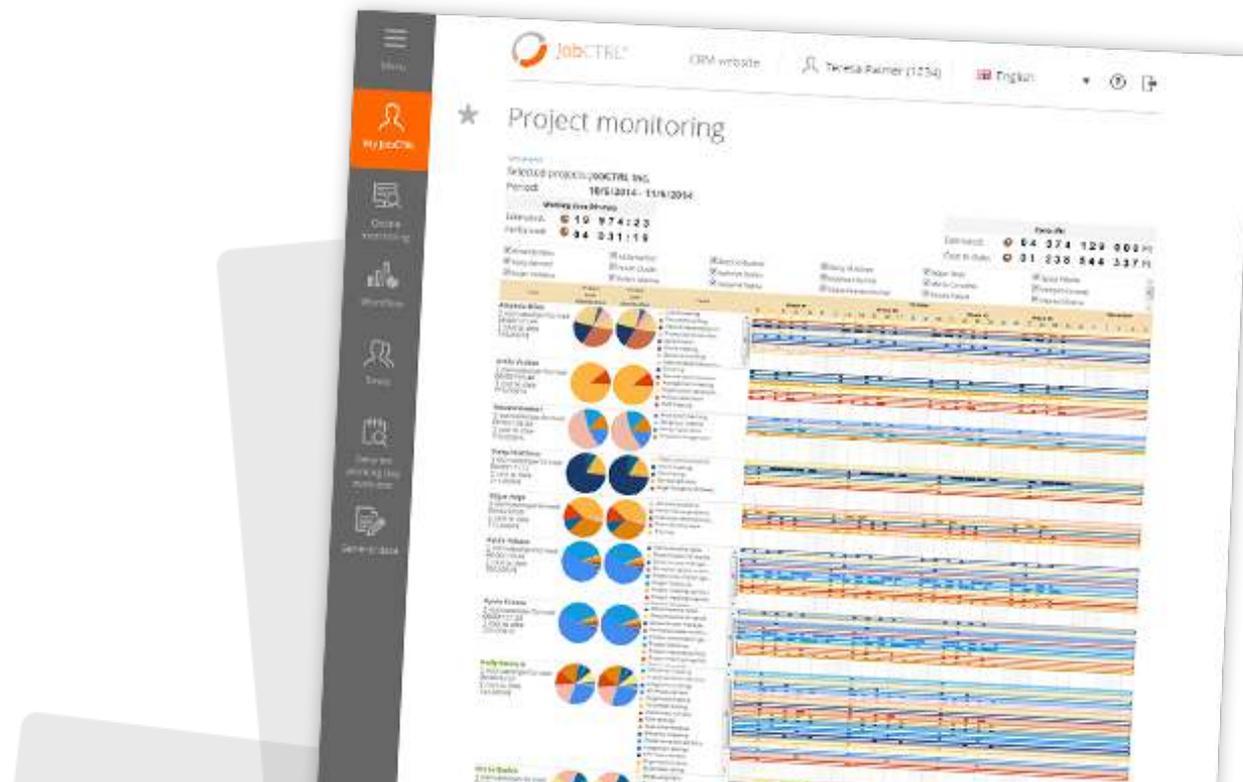

- allow flexible workload adjustment
- ensure reasonable resource utilization
- sustainable high level productivity

Dynamic control over budget and finance

JobCTRL® is equipped to review or analyze project statuses in terms of schedule and cost. With undelayed task progress information the Online Project Monitoring enables the management with:

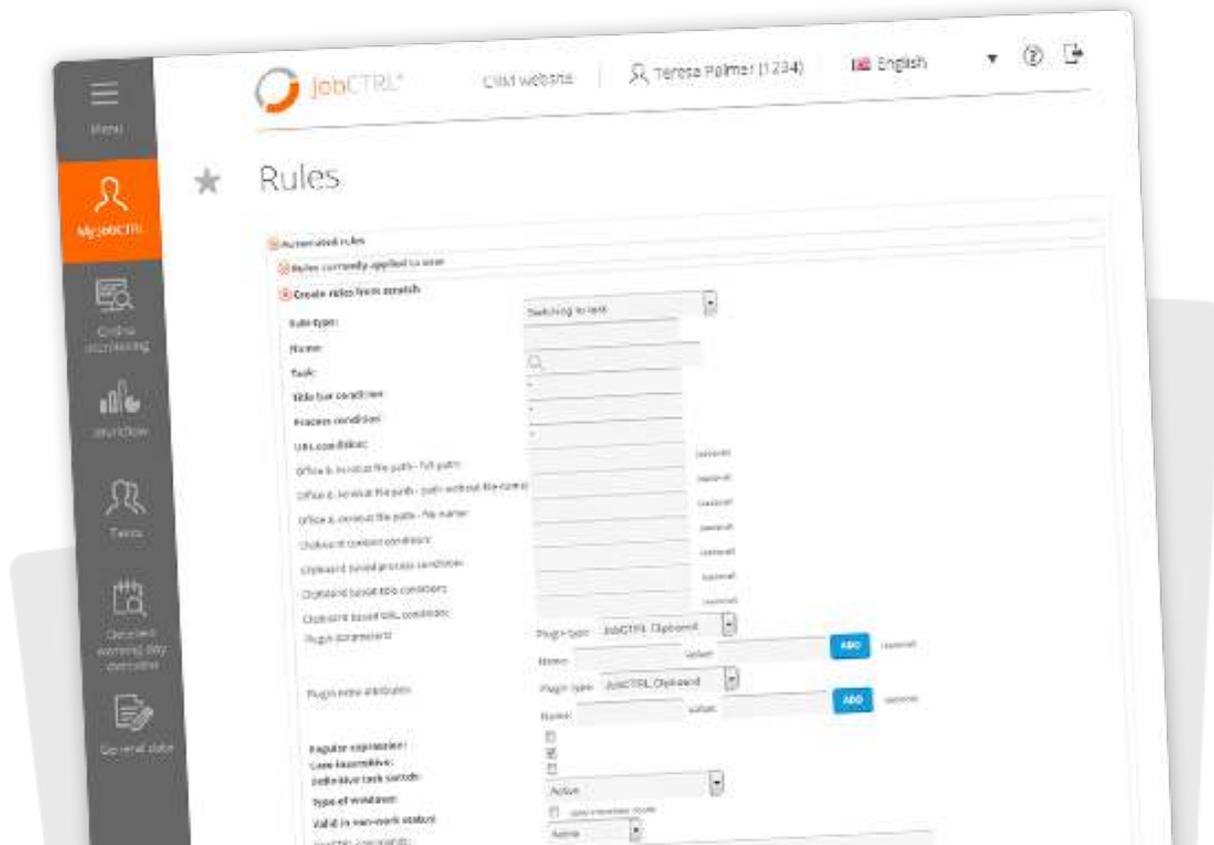

- unbiased comparison of actual project performances at any phase
- profitability forecasts in different organizational setups
- effective assessment through estimated, expected and actual cost performances

Innovative automations

In JobCTRL® all working time is automatically documented and mapped with the appropriate task, project and customer - without manual activity logging. Different levels of rule based workflows can be defined to automate:

- assigning tasks and meetings to users according to the active applications
- task and project creation with precise measuring points
- separation of non-work activities from

Usability in practice

Visible resource utilization with Online Project Monitoring.

Telenor extended JobCTRL® to the nationwide customer service points to make resolving customer issues transparent throughout the technical, billing, online sales and non-voice back-office groups. Customer service operational efficiency was improved by 14% after the task allocations and available resources had been shared. Deutsche Telekom improved its back-office productivity with automated task assignment. JobCTRL® self-learning rules proved in practice how efficiently it can separate the simple cases from the time consuming ones by measuring the processes.

Field force optimization

Simple still accurate administration is vital for UNIQA - a leading insurance company in Europe - to organize the field work for hundreds of licensed agents and salespeople. Most efficiently they could do it with the JobCTRL® mobile application, which assign fieldwork times, locations, work calls, and business trips to the relevant customers and projects. It also enables field agents to upload documents , which can be monitored and reported in the offices without delay.

Invitation to test drive - with an inspiring insight

JobCTRL® encourages agile managers and innovative leaders to discover measurable positive impacts and verifiable benefits at their company. With free access to all features, set your trusted performance indicators and achieve your productivity goals before committing to subscription! Our consultants will guide you in person and with best practises to develop the customizations delivering the targeted outcomes.

Measure tasks, which were only guessed before, test new workflows and processes, monitor standard work activities with new productivity metrics to

- discover hidden productivity trends
- enhance employee motivation
- verify notions through measured and valid KPIs
- learn how more than 1000 enterprises develop their market position every day

We are certain that a double digit productivity increase will close the pilot. After the pilot period, all of your customizations, data, and actions remain intact and your dedicated expert will assist in extending live JobCTRL® to further workflows, projects and work groups.

Simple and flexible pricing

The service fee of JobCTRL® can be simply by user per day calculated. The daily less than USD 1 service fee is insignificant compared to the cost of employment for a company. A quick return with considerable profit can be realized by the increased productivity achieved with the JobCTRL®.

Suppose the monthly employment cost of a user is \$1, the guaranteed 10% productivity growth generates at least \$200 profit while the service fee - calculated with 20 work days a month - is less than \$20. It is as little as a tenth of the minimum profit that a company can achieve by the JobCTRL®.
